

## Z<sub>2</sub>O<sup>US</sup> features & benefits

**Point-of-entry patented electronic water conditioning** for the entire home, pool and garden is accomplished by installing the Zeta Rod into the main water line as it enters the home.

The Zeta Rod is designed to **fit into standard piping and plumbing layouts**. Unlike traditional salt-based water softeners, the Zeta Rod takes up minimal space and **requires no drains or special plumbing loops**. The electronics are designed to be wall mounted and out of the way and there are **no heavy bags of salt or large tanks to take up floor space**.

Because the Zeta Rod functions as a capacitor, power consumption is almost too low to measure. **Cost of electricity to operate: about two cents a day.**

The Zeta Rod system is delivered as a kit with all components **pre-assembled for easy installation**.

The system is **ETL listed to UL Standard 61010-1 and Certified to CAN/CSA STD C22.2 NO. 61010-1.**

The Zeta Rod system is **maintenance-free and works continuously 24/7, whether water is running or not**. Once installed, just plug it in. No more lugging bags of salt or flushing filters.

All Zeta Rod systems are **IAPMO GREEN certified and listed, meeting Uniform Plumbing Code requirements and ANSI/NSF part 61 standards for Drinking Water Systems - Health Effects**.

**Fresher, cleaner tasting water** results from elimination of bio-films on pipe and vessel walls. Because there are no added salts or chemicals, **water retains its natural mineral balances**.

Zeta Rod systems electronically conditioned **water feels naturally refreshing, without the slippery feel of chemically softened water**, making it ideal for bath and shower.

**Shower nozzles, pipes and drains remain free of scale build-up**. Expensive plumbing fixtures are protected from corrosion and are easily wiped clean to maintain their new appearance and finish.

**Laundry comes out cleaner and brighter, with less detergent**.

**Zeta Rod conditioned water is ideal for house and garden plants**. Because water that is conditioned with a Zeta Rod is reduced in surface tension, the water is "wetter" and soaks into the soil more thoroughly, rather than beading on the surface. This allows for greater penetration of water to the root zone, reducing water waste and allowing for better moisture and nutrient uptake.
